

Qualities of the Ideal Industrial Mounted Bearings Partner

Industrial distributors, OEMs and end users often require reliable access to solid and split pillow blocks and flange bearings. These crucial mechanical components are designed to provide critical shaft support in mounted bearing systems that are used in a wide range of industrial applications.

Given their importance, you will want to make sure you choose the right mounted bearing partner. One that can meet all your needs.

HERE ARE 5 THINGS TO LOOK FOR IN A DEPENDABLE MOUNTED BEARING MANUFACTURING PARTNER:

At Standard Locknut, we strive to be a highly collaborative partner for industrial businesses across a wide range of industry verticals. These businesses rely on us to be more than just a mounted bearing supplier, but rather a trusted partner and extension of their industrial engineering and sourcing team.

We pride ourselves on being easy to work with and strive to build long-term collaborative partnerships with our customers.

A WIDE RANGE OF MOUNTED BEARING SOLUTIONS

Your partner should offer a variety of mounted bearing assemblies, including both split and solid pillow blocks and flange units ranging from 1-3/16" to 50" in shaft size. This will eliminate the need for tailored housings and permit more cost-effective bearing arrangements.

BEARING COMPONENT CUSTOMIZATION

More complex industrial bearing applications often require highly customized solutions to maximize performance. Your mounted bearing design/production partner should be able to modify existing components or engineer new pillow block designs based on your specific requirements.

DEEP INDUSTRY EXPERTISE

Specific application requirements often vary from one industry to the next. Therefore, your mounted bearing partner should have demonstrated experience working with a wide range of industries — from aggregate and steel production to mining, pulp and paper, power generation, and heavy movable structures (HMS).

EASY, HASSLE-FREE SOURCING

Time is usually of the essence on industrial job sites. So, you need a partner with a broad range of available (in stock) standard product inventory as well as accelerated delivery options if your job requires it.

STRONG CUSTOMER SERVICE AND SUPPORT

Mounted bearing specifications and requirements can be highly technical, often requiring expert guidance and technical engineering assistance. That's why you need a partner who's there when you need them, whether by voice, text, email or chat. At Standard Locknut you will find all of our customer service, engineering and manufacturing assistance located at our Westfield, IN facility.
