

The I-Power Bearing Solutions from Standard Locknut

Standard Locknut Expands Its Product Lineup

Heavy industries rely on industrial bearing manufacturers that can provide a full range of solution capabilities for mission-critical applications. The Standard Locknut I-Power Series expands our lineup with two lines of engineered mounted roller bearings:

- **Type E mounted tapered roller bearings**
- **S2000 mounted spherical roller bearings**

Both lines offer advanced performance features and durability to meet the toughest challenges often encountered in heavy industry applications.

Standard Locknut Type E and S2000 engineered mounted roller bearings are available as a two-bolt pillow block, four-bolt pillow block or four-bolt flange.

Whatever your specialty bearing and accessory needs, you can count on Standard Locknut to deliver high-quality components on time, every time.

Easy Installation

I-Power Series bearings are **pre-assembled** and **pre-lubricated** with EP2 grease. They're ready to go out of the box, which makes installation **simple and easy**.

Maximum flexibility

I-Power Series bearings are dimensionally interchangeable with other products, thereby providing industrial users with **greater application flexibility**.

Extreme durability

I-Power Series bearings feature **cast iron** housings and solid bases to ensure high durability in the most challenging application environments.

Rigorous manufacturing standards

I-Power Series bearings are fabricated under the **highest-quality** manufacturing standards to optimize performance and **lower maintenance costs**.

Choice of housing types and finishes

I-Power Series bearings are available in a wide range of housing types and finishes to give industrial users more **application options**.
